TA Questions

Question	N	n	SD	D	N	A	SA	N/A	IM	DI
The teaching assistant was well prepared.	24	17	1	0	0	2	14	0	4.9	0.3
The teaching assistant was helpful.	24	17	1	0	0	1	15	0	4.9	0.3
The teaching assistant was considerate of students.	24	17	1	0	0	1	15	0	4.9	0.3
The teaching assistant was easily understood.	24	17	1	0	0	2	14	0	4.9	0.3
The teaching assistant was an effective instructor.	24	17	1	0	0	2	14	0	4.9	0.3

Question	%Favourable
The teaching assistant was well prepared.	94%
The teaching assistant was helpful.	94%
The teaching assistant was considerate of students.	94%
The teaching assistant was easily understood.	94%
The teaching assistant was an effective instructor.	94%

Comments
Very good.
He always explained things in detail which helped me understand things well. Nothing to improve.
Very helpful TA. He would always be willing to help and answer your questions and he would let you explain yourself for each question even though it may be wrong and then correct you accordingly, making sure you understand each concept.
Brandon was thoughtful and very coherent, a great teacher and understood the students well.
I think that they supported a lot with guided questions so that they led you learn by yourself but, guided you to the learning goal. Also, he is helpful to later and answer any additional questions.
Helpful in explaining the materials well so that the students get a detailed understanding of the lab material.
Able to provide helpful advice when we were struggling on challenging questions and was also prepared to answer any follow up questions.
Really nice! Went above and beyond in giving explanations and relating to course content.
Very nice and helpful! Did a great job breaking complex concepts down into understandable concepts.
Communicates very effectively with students.
Helped understand the lab very well
Did a great job in teaching crucial concepts.

Explanatory Note

Percent Favourable Rating

This is the percentage of respondents who rated the instructor a 4 or 5 (Agree or Strongly Agree).

Interpolated Median

The data collected for Student Experience of Instruction (SEI) are ordinal in nature, with a natural order (from 1 to 5). While the mean may be used as a measure of central tendency for such data, it is not an appropriate or accurate representation of SEI data (cf. Stark & Freishtat, 2014). The usual measure of central tendency for ordinal data is the median. As a result, we have been reporting the mean and the median for the last several years. After considerable thought and data modeling, we now believe that the interpolated median is the best representation of the data, since it takes the frequency distribution into account.

Consider the following example from 2015W, the two course sections have identical mean (3.8). However, the instructor in section 2 received 77% favourable (4-5) ratings, compared to 53% for the instructor in section 1. The Interpolated median values of (3.7 and 4.2), much better reflects the distribution of the scores above and below their respective median. Furthermore, the interpolated median is better correlated with percent favourable rating; such that an interpolated median of 3.5 on a Likert scale of 1 to 5, corresponds to 50% favourable rating.

Frequency Distribution		
Response for University Module Item	Section 1	Section 2
5 = Strongly agree	5	5
4 = Agree	3	5
3 = Neither agree nor disagree	6	0
2 = Disagree	1	2
1 = Strongly disagree	0	1
Mean	3.8	3.8
Median	4.0	4.0

UBC Student Experience of Instruction

Interpolated Median	3.7	4.2
Percent favourable rating	53%	77%

Dispersion Index

The dispersion index is a measure of variability suitable for ordinal data (Rampichini, Grilli & Petrucci 2004). This dispersion index has values between zero and 1. A zero dispersion index indicates that all respondents in the section rated their experience of instruction the same. An index value of 1.0 is obtained when the respondents are split evenly between the two extreme values (Strongly Disagree & Strongly Agree), a very rare occurrence. In SEI data at UBC, the index rarely exceeds 0.85, and mostly for surveys not meeting the minimum recommended response rate.
